---

Dedicated Cross-Platform Engineer with a proven track record of delivering high-performance iOS and Android applications for global market leaders. Specialized in scaling complex architectures, such as Sweden's leading pregnancy monitoring platform (Babyjourney). Expert in bridging the gap between seamless UI/UX and robust native performance, with a deep focus on code maintainability and cross-functional leadership in international environments.

---

### Babyjourney / Sr. React native developer

OCT 2023 - APRIL 2026, STOCKHOLM, SWEDEN

**Role Overview:** Provided end-to-end technical leadership for Sweden's top pregnancy app, spanning the React Native mobile experience, React.js web dashboards, and a serverless Firebase backend. Architected scalable cloud logic and internal tools to support real-time data monitoring for thousands of users.

#### Expanded Key Contributions:

- **Full-Stack Feature Ownership:** Developed and maintained end-to-end features, from the React Native mobile UI to the Firebase Cloud Functions and Firestore database architecture, ensuring data integrity across the ecosystem.
- **Serverless Architecture:** Authored and optimized Firebase Cloud Functions to handle high-concurrency events (e.g., push notification triggers, automated health report generation, and secure data migrations), reducing client-side processing overhead.
- **Web Dashboard Development:** Engineered a robust internal administrative portal using React.js, allowing the content and marketing teams to manage pregnancy milestones and user-generated content in real-time.
- **Real-time Infrastructure:** Leveraged Firebase Realtime Database/Firestore and Cloud Storage to implement instant synchronization of user health journals, ensuring a seamless handoff between devices.
- **Analytics & Growth:** Integrated Firebase Analytics and Remote Config to perform A/B testing on new features, directly contributing to increased user retention and engagement through data-driven UI adjustments.
- **Security & Auth:** Implemented complex Firebase Security Rules and Cloud Functions-based Authentication hooks to ensure HIPAA-level (or GDPR) data privacy for sensitive maternal health information.

## **VEA / React native developer / *Integrated Enterprise SaaS Ecosystem***

DEC 2021 - OCT 2023, California, United States

**Role Overview:** Engineered a comprehensive, multi-module SaaS platform designed to streamline business operations. Focused on translating complex data structures—ranging from accounting ledgers to real-time ticketing—into a high-performance, intuitive mobile interface.

### **Key Contributions & Achievements:**

- **Complex Module Architecture:** Developed and optimized diverse functional modules including Accounting, Ticketing, and Project Management, ensuring a consistent user experience across radically different business use cases.
- **Dynamic Data Visualization:** Built sophisticated Monitoring Dashboards using advanced charting libraries, enabling business owners to track KPIs and financial health in real-time with high-performance rendering.
- **Complex State Management:** Orchestrated a massive global state for the Task & Project systems, implementing optimistic UI updates to ensure the app felt instantaneous even during heavy data synchronization.
- **Scalable UI Component Library:** Created a reusable, proprietary component library to standardize complex forms, data tables, and scheduling interfaces, accelerating the development of new SaaS features by 30%.
- **Advanced Scheduling Engine:** Engineered a high-touch Appointment Booking system with time-zone handling, conflict resolution logic, and local calendar integration for both iOS and Android.
- **Customer CRM Dashboard:** Designed and implemented a high-density Customer Management interface, prioritizing searchability and quick-access actions for high-volume business users.

## **2Dam Creative / React native developer / *Multi-Client Agency***

MARCH 2019 - DEC 2021, MELBOURNE, AUSTRALIA

**Role Overview:** Acted as a core Mobile Developer within a fast-paced agency environment, delivering bespoke digital products for diverse industries. Specialized in building scalable, high-conversion mobile solutions.

### **Key Contributions & Achievements:**

- **Real Estate Platform Development:** Lead the frontend development for a premier real estate application, featuring high-resolution property listings, interactive maps, and a robust "Favorites" system for user lead retention.
- **Asset & Dynamic Theming:** Implemented a sophisticated dynamic theming engine using Styled Components/StyleSheet, enabling instant UI skinning (logos, colors, fonts) based on client-side configurations.
- **Performance-Driven UI:** Optimized image-heavy real estate feeds using advanced caching strategies and lazy loading, ensuring smooth scrolling and low data consumption for users.

browsing property galleries.

- **Third-Party Integrations:** Integrated various third-party APIs, including Google Maps for property location services and specialized CRM tools for real estate agent lead tracking.

## Education

---

### CITE Technical Institute Inc, / Associate Degree

JUNE 2014 - MARCH 2016, PIT-OS, TALAMBAN

### Cabancalan National H.S. / High School

MANDAUE CITY

---

## Skills & Tools

- 
- React Native
  - React.JS
  - IOS/Android
  - Firebase
  - Cursor
  - Claude AI
  - Gemini AI
  - RTK-Query
  - React-Query
  - Redux-SAGA
  - Apple Connect
  - Redux-Toolkit
  - Context API
  - Sentry
  - GIT
  - BitBucket
  - Gitlab
  - GitHub
  - Xcode
  - Android Studio
  - Postman
  - ClickUp
  - Favro
